

**FOR IMMEDIATE RELEASE**

## **Intellex Increases Production of Next-Generation RFID Tags**

*Selects strategic manufacturing partner for volume production of its extended capability RFID tags*

**Santa Clara, Calif. – August 28, 2007** – Intellex Corporation, *the Leader in Extended Capability RFID*, today announced its strategic partnership with Pimatronics Ltd., a Hong Kong-based electronic manufacturing services provider with a volume production facility in China, to fabricate its line of next generation extended capability RFID tags. This partnership reflects Intellex's latest step in building a highly-efficient supply chain with the ability to deliver high volume, quality products to the RFID industry. Intellex's tags provide capabilities far beyond those of traditional passive RFID tags, at a fraction of the cost of active RFID.

With a flexible, high quality, automated production process utilizing the latest assembly technologies, Pimatronics offers an ideal RFID tag assembly and test solution. Based on an accredited ISO9001:2000 process, Pimatronics matches high quality with a high volume capacity, capable of producing over one million tags per month. Intellex started production of its next generation STT-7000 battery-assisted passive RFID tag with Pimatronics, utilizing ultrasonic welding to achieve IP67 rated tag enclosures and laser marking for high-quality, durable serialized part marking. As Intellex continues to bring best-in-class products to market, this partnership provides a means to meet the ever-growing demands of the RFID industry.

"Pimatronics is the ideal company for us to partner with to expand our RFID tag offerings with volume deliveries," said Russell Shikami, vice president of operations at Intellex. "They are well-respected in the industry and are able to quickly and efficiently work with us to deliver a high quality product to the market. As our volume increases and demand for additional tag form factor grows, Pimatronics will be able to meet our need and deliver the highest quality products to our customers."

Intellex's revolutionary solutions provide companies the ability to automatically track valuable assets with flexibility, precision and security, over large areas and in challenging environments. Whether tracking vehicles in a yard facility, airline containers on the tarmac, manufacturing work-in-process, reusable operational assets or personnel, Intellex's solutions offer extended range, reliability, memory and security far beyond standard passive RFID, and at a lower cost than active.

"We are excited that Intellex has selected us as its manufacturing partner," said Ocean Lee, general manager of Pimatronics. "Intellex has developed a truly unique and valuable product in the RFID market and we are committed to providing them with world class manufacturing services in the shortest time to market."

**About Intellex Corporation**

Intellex is the leader in Extended Capability RFID solutions, products and technologies. Our Intelligent RFID Platform, comprising high performance multi-protocol tags and readers, enables solutions for asset tracking, vehicle/yard management, manufacturing WIP control, supply chain automation, parts maintenance, access control and other applications. It features range, reliability, memory capacity and security far beyond standard passive RFID, and at a fraction of the cost of active.
